Title : Toxicity and Fungicidal Activity of the Chlorine
Derivatives of Benzene as a Function of Their
Structure.

Orig Pub: Biologia, 1957, 12, No 9, 583-692.

Abstract: Herbicidal (using rye sprouts) and fungicidal (us-
ing rye treated with *Tilletia foetida* (Wallr) Liro)
activities of the chlorine derivatives of benzene
(C B) were investigated. The most toxic CB are
those having 2 Cl atoms or less and situated next
to each other are 1,2,3-C₆H₃Cl₃ and 1,2,4,5-C₆H₂
Cl₄. Their toxicities border with the herbicidal

Title : The Effect of Pentachloranisole on *Tilletia foetida* (Wallr.) Liro in Field Experiments.

Orig Pub : Polnohospodarstvo, 1957, 4, No 3, 583-587.

Abstract : Comparative tests on the effect of pentachloranisole, hexachlorbenzene, and pentachloronitrobenzene against *T. foetida* were made in winter wheat. It was found that pentachloranisole has a positive effect, but as far as practical dosages are concerned (200-400 mg. of active substances per kilogram of seed) it proved less effective and cannot be recommended for wide application.

"An Attempt for a New Interpretation of the Dosage-Efficiency Curves and the So-Called Stimulation"

Bratislava, Biologia, Vol XVIII, No 4, 63, pp 290-294.

Abstract [Author's German article, Slovak summary, modified]: An equation was derived, corresponding to the Gauss integral, which can be used for the study of the effect of nutrients on the growth speed in plants. In contrast to the Gauss integral the equation (containing two independent variables, the nutrient saturation level and the disturbance factor) can express curves of efficiency exceeding 100% of the control value. Emphasized is the significance of the nutrition of the experimntal plant for the interpretation of results, particularly the so-called stimulation phenomenon.

TITLE: Contribution to a retrospective assessment of treatment in endogenous depressions [This paper was presented at the 7th Annual Psychopharmacological Meeting, Jesonik, 20-23 January 1965.]

SOURCE: Activitas nervosa superior, v. 7, no. 3, 1965, 292

TOPIC TAGS: drug treatment, psychoneurotic disorder

ABSTRACT: During a 5 year period, patients with endogenous depressions represented 6.52% of the total admissions to authors' hospital. The ratio of male to female patients was 1:3.7. The largest number of patients were in the 50-60 year group. The average length of hospitalization was 41.2 days; use of imipramine reduced this to 36.1 days; use of convulsions required 46.0 days. Prague, Ceskoslovenska Psychiatrie, Vol 62, No 4, Aug 66, pp. 254 - 257

Abstract [Authors' English summary modified]: 8 women were treated for endogenous type depressions by standard doses of imipramine, and the therapeutic effect of fluphenazine and chlorpromazine on the anxiety aspect and on the overall clinical condition of the patients was studied. Comparison of the two drugs was made on the basis of the Chassan double-blind test. No significant differences between the effect of the two drugs were found. Economical advantages of the method are discussed. 1 Table, 14 Western, 1 Czech reference. (Manuscript received 24 Apr 65).

TEXT: (21a⁴, 77; Registered June 25, 1959; Patent Application 3763-59).
Wave-guiding terminal resistance, mainly for high outputs in the microwave band,
with a progressively widening layer of the resistance mass, characterized as
follows: The resistance has the shape of a vertical truncated pyramid or of a
truncated cone made of the resistance mass, showing a recess along the height,
which is connected to the equal profile of the wave guide in such a way that the
wave-guiding tube with inner rectangular profile is connected to the equally
rectangular profile of the recess passing the height of the pyramid. This cone
or this pyramid is embedded in a case, the thickness or wall shape of which broad-
ens to form a pyramidal or conical sleeve, the surface of which is equipped with
cooling fins. Follow 4 points of patent definition.

"The Role of the Pituitary in Changes of the Ascorbic Acid and Glutathione Level in the Brain of Rats During the First 24 Hours After X-Ray Irradiation."

Prague, Casopis Lekarů Ceských, Vol 105, No 30, 15 Jul 66, pp 812 - 815

Abstract [Authors' English summary modified]: After whole-body irradiation with a dose of 600 r no changes were observed in intact rats; the brain of adult and 6 day old rats who underwent hypophysectomy showed a decreased content of ascorbic acid and of glutathione. No changes were observed when ACTH was injected intraperitoneally into non-irradiated rats. It seems that other factors, apart from the simple change in the amount of the circulating ACTH influence the contents of ascorbic acid and glutathione in the brain. 4 Tables, 5 Western, 4 Czech references.

vák Academy of Sciences; Burp. Ed.: Ladislav Jerš, Tech. Ed.: František
Kondíř.

PURPOSE: This collection of papers is intended for engineers and scientific
workers in the field of turbomachinery.

CONTENTS: The collection covers turbomachinery theory, investigations of the
flow of working substance in basic elements of turbomachines, phenomena ac-
companying flow and variable with time, and investigations of various problems
on experimental machines and models. A Russian and an English summary follows
each paper. No personalities are mentioned. There are 189 references: 1)
Czech, 51 English, 30 German, 20 Russian, and 1 Dutch.

Bronchoscopic differential diagnosis of bronchoglandular perforations ROZHL. TUBERK. 1956, 16/6 (289-292) Illus. 6
The bronchial tree was investigated in 400 cadavers of patients in whom bronchoscopy had revealed slight enlargement of the bronchi and spots which had been considered suspect of perforation. The latter were excised and investigated microscopically. It was found that these spots or depressions in the mucosa were probably the sequelae of bronchoglandular perforation covered by mucosal scarring which contained anthracotic pigment and showed fine plication extending into the centre of the lesion. Newly formed dilated capillaries were observed running into these depressions. These pictures must be clearly differentiated from the sharply bordered orifices which have nothing in common with perforations or lymph nodes. Intermediary stages often make an accurate diagnosis difficult. In such cases narrow-layer tomographs with bronchographs using thinly applied contrast medium, may be of diagnostic value. (XV, 11)

TITLE: A contactless servodrive with asynchronous motor

PERIODICAL: Referativnyy zhurnal, Avtomatika i radioelektronika,
no. 12, 1962, 49, abstract 12-2-98 a (Czech. pat.,
cl. 21c, 62/20, no. 95716, Jun. 15, 1960)

TEXT: The patented servomechanism is distinguished by contactless devices used as synchronizing elements and by an asynchronous 3-phase motor used as the power stage. The synchronizing system consists of a tacho-generator, Selsyn transmission, discriminator, and four electronic switches (triggers). The secondary selsyn and the tachogenerator are mechanically coupled to the asynchronous motor. The selsyn bridge circuit becomes unbalanced with the rotation of the rotor of primary selsyn and a signal is applied to the discriminator. The output signals of the latter open three triggers which control the motor supply. Depending on the phase difference, either one or the other group of triggers operates, which results either

in a right- or left-hand rotation of the motor. The motor rotates until the selsyns are again in phase. The feedback is applied through the tachogenerator. /- Abstracter's note: Complete translation. /

TITLE: (A circuit for regulating controlled silicon rectifiers)
CZ Pat. No. PV 1408-65

SOURCE: Vynalezky, no. 10, 1965, 10-11

TOPIC TAGS: silicon diode, semiconductor device, transistor, rectification

ABSTRACT: A circuit for regulating controlled silicon rectifiers in full-wave circuits is described which is distinguished by the feature that to the full-wave secondary coil of the power transformer are connected high voltage rectifier tubes which are connected in parallel through a charging resistor to a discharge diode which in turn is connected to an integrating condenser connected at the other end to the middle of the same coil of the power transformer to which is also connected a self-inductance. The other end of the self-inductance is connected to the mounting of both high voltage rectifier tubes and to the middle of the power transformer mentioned above and through the feedback coil of the blocking transformer is connected the base of a transistor which is likewise connected to a series combination constituted by the source of secondary voltage, the source of regulating voltage and

Card 1/2

L 29957-66

ACC NR: AP6006151

by the charging condenser mentioned. The emitter of the transistor is connected to the one pole of the other secondary voltage source, of which the other pole is connected to the collector of the transistor through the second winding of the blocking transformer. The third winding of the blocking transformer constitutes the modulated pulse output for the controlled diode.

TITLE: Analog to digital (pulse) converter

PERIODICAL: Referativnyy zhurnal, Avtomatika, Telemekhanika i Vychislitel'naya Tekhnika, no. 2, 1963, 62, abstract 2B324 P (Czech. pat. class 42 m, 14, no. 101206, October 15, 1961)

TEXT: Patented is a converter of analog quantities into digital (pulse) ones made on the basis of an ordinary pointer-type AC instrument, for example of the electrodynamic type, and distinguished by simplicity of design and high sensitivity caused by the low inertia of the moving parts. The gist of the invention consists in that around the scale one disposes several digit discs with rectangular cutouts used for coding (the number of discs is determined by the number of code digits in the binary system). These discs are fed through the primary windings of individual code transformers a high AC voltage (about 2 kv), one of the poles of whose supply is grounded. The secondary windings of the code transformers are connected to sensitive AC relays controlling pulse counters or
